

### Pursuing green growth

In response to a growing interest in environmental issues in the international community and among our stakeholders, KKPC actively implements international environmental agreements. Moreover, we stay ahead by observing internal environmental regulations that are stricter than legally required, and undertake a wide range of environmental management and protection activities. We established our environmental vision as being 'a company that creates the future as a partner of humanity and the environment' in 2008 when we prepared for another leap forward sustainable growth.

Our green policy consists of considering all EHS processes, continuous improvements in EHS performance, zero EHS accidents, minimizing environmental pollutants, improving work environment, strengthening internal and external awareness of EHS management, and active communication with stakeholders. We have also set four mid- to long-term goals – 'developing eco-friendly products', 'saving energy and protecting climate', 'taking the lead in EHS at home and abroad' and 'strengthening system execution capabilities'. In order to meet these goals, we established a number of key strategies, and as a result of these efforts, we earned the 'green company' certification from the Korean Ministry of Environment.

#### ENVIRONMENTAL VISION SYSTEM

# ENABLE green growth

The natural environment is the foundation for human life, and must be protected at all costs. KKPC strives for eco-friendly growth through green chemistry, enabling humankind and the environment to co-exist in harmony.
