YEOSU ENERGY SALES (COMBINED HEAT & POWER PLANTS)
(in KRW billion)

■ Steam Sales from Combined Heat & Power Generation
■ Electricity Sales from Combined Heat & Power Generation

In 2010, we completed debottlenecking of our second combined heat and power plant in Yeosu, which began operations in May 2009. While Yeosu Energy I sells steam to our chemical affiliates as well as Columbia Chemical, Yeosu Energy II allows us to sell electricity to Korea Electric Power. We plan to increase steam sales in 2011, adding KRW 50 billion in sales and KRW 20 billion in operating profit to our bottom line.
